

PERMANENT PREMIUM TIRE SEALANT

Center Pivot Tire Inflation Maintenance

- BEAD LEAKS
- RIM LEAKS
- POROSITY LEAKS
- WEATHER CRACKS
- UP TO 3/4 INCH PUNCTURES

Here's How LiQuiTube Works

- Seals punctures up to 1/4" in standard tires. Up to 3/4" in heavy ply tires.
- Coats all inner surfaces of tire & rim to prevent all forms of air loss including rim, bead, & porosity leaks.
- Installs easily through the valve stem once the valve core is removed.

LiQuiTube
Stays Effective For The Life Of The Tire!

Flat Tires on Center Pivot Irrigation Systems can harm crops, destroy gear boxes, and cause hours of work digging in the mud to replace tires. LiQuiTube forms a permanent liquid inner tube. The coating remains liquid and stays in place even when the center pivot stops moving. LiQuiTube seals all sources of air loss including bead leaks and weather cracks so you can continue to use tires maintenance free season after season. Keeping all your tires properly inflated with LiQuiTube will save you valuable time by not having to check and top off air pressure every year. LiQuiTube allows tires to be run at lower air pressure without worrying about losing additional pressure and running the tire off the wheel. The softer cushion from running lower air pressure allows better traction with less soil compaction. Air filled tires are lighter weight than other flat tire prevention methods which helps reduce tire ruts. The give in an air filled rubber tire allows some absorption when gear boxes engage reducing wear and tear.

Many different solutions have been proposed for fixing center pivot tire issues.
